NEW!

COLOR SCAN

REAL TIME COLOR FLOW DOPPLER SCANNING AND DUPLEX ULTRASOUND FOR UNDER $100,000.

...FOR UNDER $100,000.

CALL 1-800-334-4531...TODAY.

- Featuring hands free operation with simple voice activated commands.
- Featuring 100% control from remote touch sensitive menu screen.
- Featuring the first truly mobile color Doppler scanning system. Compact 2' x 2'
- Featuring a system designed for field footprint.
- Cerebral and peripheral vascular exams upgradability.
- Made quickly and easily.

HOW TO KEEP DOCTOR’S ORDERS FROM GOING IN ONE EAR AND OUT THE OTHER.

Patients listen to medical counsel, but all too often they don’t hear. Especially when your medical advice involves making lifestyle changes.

Now, Heart Rx comes to your visual aid. This state-of-the-art complete package of materials, from posters and pamphlets to prescription pads, designed to help your patients understand the vital information you provide them during treatment.

Heart Rx materials include facts and figures about heart-healthy nutrition, blood pressure, smoking, warning signs of heart attack and stroke and much more — including information about Calling It Quits, our AHA program to help patients stop smoking.

Altogether, it’s a lifesaving package that’s sure to make your sound medical advice unforgettable.

To request Heart Rx or more information, write to:
Director of Healthcare Site Programs
7320 Greenville Ave., Dallas, TX 75231
Or simply call your local American Heart Association.
3-D Transcranial Doppler Scanner

Essential for a complete, noninvasive cerebrovascular examination.

Trans-Scan® is a true second generation transcranial Doppler system that provides 3-D spatial documentation unavailable in conventional instruments.

The scanner tracks, documents and records the position of a Doppler sample volume within the Circle of Willis and its branches, and produces a 3-dimensional color coded ultrasonic arteriogram of these vessels. The physician also examines the intracranial vertebrals and basilar artery. Hand held transducers permit extracranial carotid and peripheral studies.

Trans-Scan® noninvasively evaluates and monitors vasospasm to eliminate serial angiograms and to assist in the timing of invasive procedures. It detects intracranial stenoses and occlusions, rules out vertebrobasilar disease, evaluates collateral capacities and hemodynamically evaluates tandem lesions.

Trans-Scan® also monitors MCA flow during cardiac and carotid artery surgery, confirms proper shunt placement, documents restored MCA flow and determines collateral capacity perioperatively.

Included is a high resolution, FFT color spectral analysis and hard copy documentation.

Model TC2-64B is a highly portable TCD system with the same applications.

Carolina Medical Electronics, Inc.
P.O. Box 307, Kinston, N.C. 27501 USA. Telephone (919) 963-5132

Exclusive distributor in the USA and Canada for EME.

Call 1-800-334-4531 for full information on both TCD systems.

American Heart Association
National Research Program

Established Investigator

1990-1991

stipend support in the cardiovascular field including stroke and related basic science problems

To assist promising physicians and scientists to develop independent research careers in academic medicine and biology.

Application Deadline
Receipt June 1, 1989
for award activation July, 1990

Information: Division of Research Administration
American Heart Association
7320 Greenville Avenue
Dallas, Texas 75231
(214) 706-1453

Participation by qualified minority candidates is encouraged.
Instructions to Authors

General Editorial Policy

Manuscripts for publication and authors' correspondence should be sent to the Editor, Oscar M. Reimnith, MD, Department of Neurology, University of Pittsburgh, Pittsburgh, PA 15261, (412) 646-9037. Articles are accepted for consideration only if they are submitted solely to this journal. Manuscripts reporting original research will not be published if a significant portion of the data has been published or submitted for publication elsewhere. If any form of prior publication, other than a short abstract, has occurred or is contemplated, a reprint or copy of the manuscript must accompany the article. If, in the Editor's judgment, prior publication or submission of the submitted article not original, the manuscript will be returned promptly without review. Each article is submitted with the understanding that all authors have seen and approved the final manuscript.

Manuscript Form

Manuscript, tables, and illustrations must be submitted in quadruplicate and should conform to the specifications in the Uniform Requirements for Manuscripts Submitted to Biomedical Journals (Ann Intern Med 1988;108:258-265 and Br Med J 1982;294:1766–1770). Manuscripts should be typed double-spaced throughout, on good quality, nonerasable paper. A separate title page should be provided. Summary, text, acknowledgments, references, legends, tables, and figures should begin on separate sheets and follow in that order. Consult the American Medical Association Manual for Authors and Editors for recommended abbreviations (Prentice-Hall, 200 Old Tappan Road, Old Tappan, NJ 07675). Define abbreviations at first appearance, and do not use in the title and summary. Use generic names of drugs. Number references by their first appearance in the text, and cite them by that superscripted number.

Title Page

The title should be brief and specific. Include name, address, academic affiliation, and highest degree(s) for each author; acknowledgment of all sources of support from both profit and nonprofit organizations; address for galley proofs and reprint requests; short title (40 characters or less) to be used as a running head; and 3-5 key words. U.S. and Canadian authors should include a telephone number. Overseas authors should give a telex number, if possible.

Summary (Abstract)

A concise description (not more than 200 words) of the purpose, methods, results, and conclusion of the study is required. Use no abbreviations.

Text

The text of experimental articles should usually be divided into sections with the headings Introduction, Materials and Methods, Results, Discussion, and Acknowledgments (if present). Other types of articles may conform to other formats. The position of illustrations and tables in the text should be clearly marked, using Arabic numerals, on the manuscript. Do not use Arabic numerals to begin sentences.

Text for all communications must be typed double-spaced throughout with new paragraphs indented 5 spaces; top, bottom, and left margins should be at least 2.5 cm, right margins 2.5 cm and unjustified. Severely limit the use of abbreviations.

Materials and Methods or Subjects and Methods

For apparatus used in research, the name, city, and state or country of the manufacturer(s) should be supplied. For experimental animals, state the species, strain, number used, and other pertinent descriptive characteristics. For human subjects or patients, describe their characteristics. When describing surgical procedures on animals, identify the preanesthetic and anesthetic agents used and state their characteristics. When describing surgical procedures on animals, state the species, strain, number used, and other pertinent characteristics.

Personal communications and unpublished data should be cited in parentheses in the text without numerical reference at the end of the article. If such a citation is from someone other than the authors, a letter must be submitted in which the direct quotation is given with the author's signature. Provide all authors' names.

Illustrations

Enclose figures in separate envelopes; use no clips. Each figure should have a label pasted on its back indicating the figure number and the top of the figure. Legends should be typed double-spaced on a separate sheet. They should be brief, yet provide sufficient description to interpret the figure; number them to correspond with the numbers in the text. To ensure clear reproduction, all illustrations should be submitted as 5x7 inch (11x17 cm) glossy prints unmounted and untrimmed. Drawings and graphs should be prepared with black India ink on a white background; no typewriting or computer print should be used. Letters, numbers, and symbols should be clear and even throughout and of sufficient size that when reduced for publication even the smallest item will still be legible. Photographs of the original drawings should be submitted. Photomicrographs must have internal scale markers. Specific permission for facial photographs of patients is required.

Tables

Tables should be cited in the text. Each table should be numbered and have a brief informative title and should be typed double-spaced on a separate page. Omit vertical rules, and use extra space to delineate sections of a table. Explain in footnotes all abbreviations used in the table. For footnotes, use the following symbols in this sequence: *, †, ‡, §, ¶, ‖, #, and then double as necessary.

Address Labels

Address labels in quadruplicate, providing name and address of author to whom correspondence should be directed, must accompany the manuscript.

Copyright Information

In accordance with journal implementation of the 1976 U.S. Copyright Law, authors must release first and subsidiary rights to their manuscript at submission. A dated cover letter containing signatures of all authors and an statement: "We, the authors, assign first and subsidiary rights to the American Heart Association in the event that our manuscript (insert title) is published by Stroke." The journal, in turn, grants authors the right to use portions of their manuscripts, without charge, in books or articles of which they are authors or editors.

Revisions

Revisions should be submitted in quadruplicate. The number assigned to the original manuscript by the Editorial Office should be quoted.

Costs to Author

In keeping with the policy of the Publications Committee of the American Heart Association for AHA journals, a manuscript processing fee of $50 (U.S. equivalent) should be submitted to the Editorial Office at the time of initial submission. If the cost represents a hardship to the author, it will be waived without prejudicing the review process. The check or U.S. Postal Money Order should be made out to the American Heart Association and should accompany the manuscript. Indicate Stroke on the face of the check.

A charge of $35 per printed page will be made. The cost of color reproduction will be borne by the author.

The author bears the cost of reprints. An order form including the cost of reprints will be sent to the author with galley proofs.
Assess intracranial and extracranial bloodflow noninvasively with...

Transpect TCD

The MedaSonics TRANSPECT TCD offers advanced features unavailable on other transcranial Dopplers. These features give you control, versatility and confidence that first-generation instruments simply cannot provide. Each feature is based on thoughtful analysis of the needs of the specialist and include the following:

- 2 MHz pulsed and 5 MHz CW Doppler optimized for both intracranial and extracranial cerebrovascular exams.
- Doppler sample volume in 2mm or 5mm steps, user selectable, for precise location of stenosis.
- Dynamic noise reduction (DNR) circuitry provides maximum Doppler information with minimal noise.
- 256 point FFT Spectrum Analysis provides more detailed Doppler frequency and velocity resolution.
- User programmable instrument set-up customizes the system for each operator.
- User selectable probe/flow angle enables correct display of blood flow velocity from 0-60 degrees.
- Integral 7" black and white high resolution flat screen monitor provides crisp, clear display from any viewing angle.
- On-board storage of more than 200 spectral displays permits extended bedside exams without need for hard copy.
- Automatic computation of peak and mean frequency, Spectral Broadening Index (SBI) and Pulsatility Index (PI).
- Optional video printer and color spectral display.
