Blogging About Stroke
A New Chapter for the Journal

Nerses Sanossian, MD, FAHA; José G. Merino, MD, FAHA

Spin has always embraced technology. The journal went online in 1998, and all the articles since Stroke started publishing in January 1970 are now available electronically (www. http://stroke.ahajournals.org/). The number of full-text article views in 2010 was >5.6 million, and the number of articles accessed via mobile devices is increasing. In 2011, Stroke started hosting bimonthly educational webinars that when broadcast live allow the audience to interact with leading stroke neurologists, and the talks are stored on the stroke Web site. Stroke has a presence on facebook, and readers are alerted of new issues via Twitter. This month, Stroke takes another step into the digital world with the launch of the Stroke blog (http://strokeblog.strokeahajournal.org).

The purpose of the Stroke blog, Blogging Stroke, is to share information about new articles published online with potential readers more quickly. The blog posts will be written by a group of stroke fellows from various programs throughout the country. We expect that there will be a new blog every weekday. In each post, the blogger will summarize the major findings of the article and place them in context, highlighting controversies and new research questions that arise from each study. The blog will be interactive, because readers will be able to comment, and we look forward to a productive online exchange of ideas among colleagues, fostering the growth of an online community of people interested in cerebrovascular disease; in other words, the future leaders of the field of stroke. By doing so, Stroke will remain the leading journal in the field of the vascular neurology.

Disclosures

None.
