Correction to: Optimal Timing of Diffusion-Weighted Imaging to Avoid False-Negative Findings in Patients With Transient Ischemic Attack

On page 1990, in the abstract, the sentence following “Conclusions” should read, “If the duration between TIA symptom onset and initial DWI is <2 hours, a repeat examination should be performed to minimize the risk of false-negative findings.”

This correction has been made to the current online version of the article, which is available at http://stroke.ahajournals.org/content/48/7/1990.
Correction to: Optimal Timing of Diffusion-Weighted Imaging to Avoid False-Negative Findings in Patients With Transient Ischemic Attack
